🚀 Requestor 5.10.2

Improvements

- Accelerated and enhanced user searching when changing requesters, creating a new request, sending emails, and in invitations ([INC-014396](#)).
- Added source icons in the request overview ([REQ-014460](#)).
- Improved HTML code transformation of incoming emails from older email client editors ([REQ-014463](#)).
- Extended search functionality to include tags ([REQ-014488](#)).
- LDAP configuration now includes the option to remove a role from all users who are no longer synchronized ([REQ-013974](#)).

Fixes

- Fixed an issue that could cause two service forms to be saved for a single ticket ([INC-014017](#)).
- Fixed the form used for creating automated tasks ([REQ-014404](#)).
- Request detail export to PDF: fixed missing images, corrected distortion of large images, and reduced excessive line spacing in text ([REQ-014357](#)).
- Fixed an issue when adding a comment from a switched tab that originally did not complete validation ([INC-014483](#)).
- Fixed adding comments to the Basic Request ([INC-014481](#)).
- Fixed a possible error when deleting a portal, category, product, priority, or company array ([INC-014476](#)).
- Fixed access to Knowledge module content via the API for End Users or Advanced Users ([REQ-014467](#)).
- Fixed the default calendar in new RQ instances ([INC-014504](#)).
- Fixed saving access settings for Operational Approval ([INC-014519](#)).
